Page 2 of 14 | 15 December 2020

English translation prepared by DIBt

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

#### **Specific Part**

#### 1 Technical description of the product

The CELO Drop-In Anchor SA plus in the sizes M8, M10, M12 and M16 is an anchor made of zinc-plated steel which is placed into a drilled hole and anchored by deformation-controlled expansion.

The product description is given in Annex A.

## 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the concrete screw is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	see Annex B 2 and C 1
Characteristic resistance to shear load (static and quasi-static loading)	see Annex C 2
Displacements (static and quasi-static loading)	see Annex C 3
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed
Durability	See Annex B 1

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	No performance assessed

Z104199.20 8.06.01-704/20

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Documents EAD No. 330232-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 15 December 2020 by Deutsches Institut für Bautechnik.

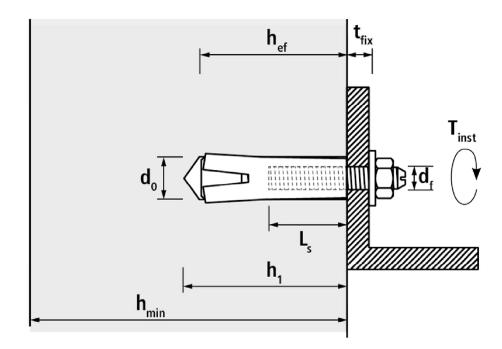

Dipl.-Ing. Beatrix Wittstock Head of Section

*beglaubigt:*Baderschneider

## **Specifications of Intended use**

#### Anchorages subject to:

Static and quasi-static loading,

#### Base materials:

- Compacted, reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013 + A1:2016.
- Strength classes C20/25 to C50/60 according to EN 206:2013 + A1:2016.
- · Only uncracked concrete.

### **Use conditions (Environmental conditions):**

· Structures subject to dry internal conditions.

#### Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The
  position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to
  reinforcement or to supports, etc.).
- The anchorages are designed in accordance to EN 1992-4:2018 and Technical Report TR 055, Edition February 2018.
- For effective embedment depth hef < 40 mm only statically indeterminate fixings (e.g. light-weight suspended ceilings with internal exposure) are covered by the ETA

### Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- · Create drill hole with hammer drill only.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted drill hole is filled with high strength mortar and only if the hole is not in the direction of the oblique tensile or shear load.
- Anchor installation in accordance with the manufacturer's specifications and drawings and using the appropriate tools.

CELO Drop in anchor SA plus	
Intended use Specifications	Annex B1

## **Table B2.1: Installation parameters**

### Fixing screws or anchor rods:

It can be used the strength categories 4.6, 5.6, 5.8 or 8.8 acc. EN ISO 898-1:2013.

### Minimal screwing depth:

The lenght of the fixing screw depends on the thickness  $t_{fix}$  on the fixed part, permissible tolerances and usable thread length  $L_{s,max}$  as well as on the minimal screwing depth  $L_{s,min}$ .

CELO Drop in anchor SA plus	
Intended use Installation parameters	Annex B2

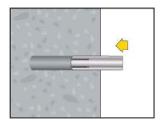

## **Installation instruction:**

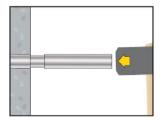

1. Drill the hole with a hammer drill

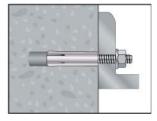

2. Clean the borehole

3. To set the anchor by hand or by hammer blows, anchor should be flush to the concrete edge

4. To spread the anchor with the setting tool. The anchor is installed correctly, if the setting pin is completely inside

5. To fix the fixture, not allowed to pass over the max. installation torque  $T_{\text{inst}}$
